

ABSTRACT

A miter saw 110 having an operable cutting blade 122 pivotally supported relative to a working surface 114 and displaceable in a first cutting plane which intersects the work surface 114 along a first cutting line X-X. The miter saw has an adjustable elongated fence 134 angularly displaceable relative to the first cutting line X-X. The
5 fence 134 is adjustably mounted on and supported by the working surface 114.
